Math I UNIT 5 OVERVIEW: Exponential Functions

Unit Outcomes	Koy Vocabulary
At the end of this unit, your student should be able to:	Key Vocabulary Terms to deepen the student's understanding
 At the end of this drift, your student should be able to: Classify exponential functions as growth or decay 	✓ Base
 Compare/contrast properties and the graphs of linear and exponential 	✓ Common Ratio
functions	✓ Constant
	✓ Explicit Form
	✓ Exponent
situation	✓ Exponential Decay
✓ Model an exponential relationship between two quantities with tables,	✓ Exponential Equation
graphs, and equation	✓ Exponential Form
✓ Recognize that the solutions to an exponential equation are represented	✓ Exponential Function
by the points on the graph	✓ Exponential Growth
✓ Understand that a geometric sequence is a sequence of numbers where	 ✓ Function Notation
the ratio between consecutive numbers is constant	✓ Geometric Sequence
\checkmark Understand that an exponential function has a <i>r</i> value greater than 1 if the	✓ Horizontal and Vertical Translation
function is growing	✓ Initial Term
✓ Identify the common ratio of the sequence	✓ Intercepts
✓ Write the first and subsequent terms of the sequence	✓ Intervals Where Increasing, Decreasing, Positive
 Evaluate functions for given domains 	or Negative
\checkmark Recognize a pattern will allow them to determine an arithmetic or	✓ NOW-NEXT
geometric model	✓ Rate of Change
\checkmark Translate between the recursive (NOW/NEXT) and explicit forms in	✓ Relative Maximum
modeling situations	✓ Relative Minimum
\checkmark Construct a table and graph of a linear function with slope m and	
exponential rate of change equal to the slope to identify the point where	
the exponential function exceeds the linear function	
\checkmark Determine the difference between the rate of change of a linear model	
(add each time) versus an exponential model (multiply each time)

Middle School Programs Building Healthy Core Learning Common Core Math I, Unit 5

Math I UNIT 5 OVERVIEW: Exponential Functions

F-IF.2 Use function notation, evaluate functions for inputs in their domains,	
and interpret statements	
that use function notation in terms of a context. <i>Note:</i> At this level, the focus	
is linear and exponential functions.	
F-IF.4 For a function that models a relationship between two quantities,	
interpret key features of	
graphs and tables in terms of the quantities, and sketch graphs showing key	
features given a verbal	
description of the relationship. <i>Key features include: intercepts; intervals</i>	
where the function is increasing, decreasing, positive, or negative; relative maximums and	
minimums; symmetries; end	
behavior; and periodicity. Note: At this level, focus on linear, exponential and	
quadratic functions; no end behavior or periodicity.	
F-IF.5 Relate the domain of a function to its graph and, where applicable, to	
the quantitative	
relationship it describes. For example, if the function h(n) gives the number of	
person-hours it takes to	
assemble n engines in a factory, then the positive integers would be an	
appropriate domain for the	
function. Note: At this level, focus on linear and exponential functions.	
F-IF.6 Calculate and interpret the average rate of change of a function	
(presented symbolically or as a	
table) over a specified interval. Estimate the rate of change from a graph.	
<i>Note:</i> At this level, focus on linear functions and exponential functions whose	
domain is a subset of the integers.	
F-IF.7e Graph functions expressed symbolically and show key features of the	
graph, by hand in simple	
cases and using technology for more complicated cases. Graph exponential	
and logarithmic functions, showing intercepts and end behavior, and	
trigonometric functions, showing period, midline, and amplitude. Note: At	
this level, for part e, focus on exponential functions only.	
F-IF.8b Write a function defined by an expression in different but equivalent	
forms to reveal and	
explain different properties of the function.	
b. Use the properties of exponents to interpret expressions for exponential	
functions. <i>For example,</i>	
identify percent rate of change in functions such as $y = (1.02)t$, $y = (0.97)t$, $y = (1.02)t$, $y = (0.97)t$, $y = (1.02)t$	
(1.01)12t, y = $(1.2)t/(10)$ and closely there are representing superpendicular provide an decry.	
(1.2)t/10, and classify them as representing exponential growth or decay.	
F-IF.9 Compare properties of two functions each represented in a different	
way (algebraically,	
graphically, numerically in tables, or by verbal descriptions). For example,	
given a graph of one guadratic function and an algebraic expression for another, say which has	
<i>quadratic function and an algebraic expression for another, say which has the larger maximum.</i>	
Note: At this level, focus on linear, exponential, and quadratic functions.	
F-BF.1 Write a function that describes a relationship between two quantities.	
a. Determine an explicit expression, a recursive process, or steps for	
calculation from a context.	
b. Combine standard function types using arithmetic operations. For	
example, build a function	
that models the temperature of a cooling body by adding a constant function	
	l

Math I UNIT 5 OVERVIEW: Exponential Functions

to a decaying exponential, and relate these functions to the model. Note: At this level, limit to addition or subtraction of constant to linear, exponential or quadratic functions or addition of linear functions to linear or quadratic functions. F-BF.2 Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate between the two forms. <i>Note: At this level, formal recursive notation is not used. Instead, use of informal recursive notation</i> (such as NEXT = NOW + 5 starting at 3) is intended. F-LE.1c Distinguish between situations that can be modeled with linear functions c. Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another. F-LE.2 Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).	
Additional Resources Materials to support understanding and enrichment	"Learning Checks" Questions Parents Can Use to Assess Understanding
 Exponential Growth and Decay Modeling exponential growth and decay (video) Graphing exponential functions (practice) Evaluating exponential functions (practice) Geometric sequences overview (video) Write explicit form of geometric sequences (practice) 	 What considerations should be taken into account when determining the boundaries and scales of a graph? What are the key features of an exponential function? When given one of the four forms of information, what should be taken into consideration when determining the best function to model the situation? How do you determine the best model for a data pattern? Why is a multiplicative rate of change the key feature of an exponential function (verbal, graph, table, equation)? When given a sequence, how do you identify whether it is arithmetic or geometric and how do you write a rule for the sequence?
